Distanza (Italian Edition) Ugo Cecchini

Il libro enuncia un metodo per definire i punti di una superficie sferica e calcolare le distanze che tra essi intercorrono. Lo fa andando a considerare due cerchi tra essi perpendicolari a partire dalle consuete rappresentazioni cartesiane della Terra, i range utilizzati per l'inserimento dei dati di latitudine e longitudine fanno riferimento al comune sistema di mappatura.

Il cerchio, come la più conosciuta sua considerazione insegna, è stato concepito come oggetto di 360° ed è stata effettuata ad essi una doppia associazione, una di lunghezza spaziale ed una di lunghezza temporale. La lunghezza spaziale è stata considerata di 39960 chilometri che, approssimativamente, rappresenta la circonferenza della Terra. La lunghezza temporale è stata considerata di 86400 secondi, ovvero il numero di secondi di un intero giorno, periodo di tempo in cui la Terra effettua una rotazione completa su se stessa. Dimenticando il vincolo di rotazione imposto dall'asse terrestre, rendendo quindi l'asse come variabile libera, è stato immaginato un movimento di rotazione rispetto ad uno qualsiasi degli assi; in tal modo ogni punto della superficie nell'arco di 24 ore torna ad essere nello stesso punto di partenza ed ha percorso un movimento spaziale pari a 39960 chilometri.

La parte riguardante il software di computazione altro non è che la computazione delle distanze tra i due punti in input ed è la parte visiva che rende di facile apprendimento quanto enunciato a parole.
