Monitoring Volcanoes in the North Pacific: Observations from Space (Springer Praxis Books)

Kenneson Gene Dean, Jonathan Dehn

This book is a visual learning experience as recorded on satellite images of volcanic eruptions and a manual describing how it is used for operational satellite monitoring. The atlas shows examples of the largest eruptions worldwide. The book fills a huge gap in the science of volcano remote sensing. A CD-ROM is included containing all the images and an associated website which will be regularly updated, showing results from new and current eruptions.
