Manuale dell'arresto cardiaco intraospedaliero (Italian Edition) Mauro Mennuni

L'arresto cardiaco è una delle cause maggiori di mortalità nella popolazione mondiale.

Ancora oggi esiste un'impressionante disparità nella sopravvivenza dell'arresto cardiaco in vari contesti sanitari, con differenze che arrivano ad oltre 5 volte. Numerosi studi hanno evidenziato la debolezza del sistema organizzativo di riconoscimento e risposta alle emergenze in ambiente ospedaliero. La qualità della formazione dei soccorritori e la frequenza del retraining risultano fattori cruciali nel migliorare l'efficacia della rianimazione.

In tale contesto, questa pubblicazione vuole fornire al personale sanitario, soprattutto ospedaliero, le conoscenze e le competenze essenziali nel gestire pazienti adulti in arresto cardiaco per il tempo che precede l'arrivo del team di soccorso avanzato e di collaborare con quest'ultimo nelle fasi successive.

Inoltre, l'approccio standardizzato e ottimizzato al malato "critico" ad alto rischio di arresto cardiorespiratorio consente il suo rapido riconoscimento e la sua efficace messa in sicurezza.

Gli Autori sottolineano la necessità di un approccio in team assistenziale, fornendo indicazioni utili per stimolare il "lavoro di squadra", definendo i ruoli e i compiti di ciascun membro e mostrando come, in questo ambito, siano rilevanti anche soft skill, quale un'ottimale comunicazione.

Il Manuale, basato sulle linee guida ILCOR 2010, è stato pensato come una sorta di compendio con istruzioni operative che si riferiscono a situazioni di emergenza ed è corredato da numerose figure esplicative e box che facilitano l'apprendimento e la memorizzazione di procedure e algoritmi di gestione.
